

What is cDMAT?

The Cambodian Developmental Milestone Assessment Tool (cDMAT) is Cambodia's first reliability-tested screening tool for developmental milestones. It facilitates early identification of delays and disability in Cambodian children using the Denver Development Screening Tool (DDST II) milestones, modified for the Cambodian setting. It consists of 129 developmental milestones in four functional domains for children up to six years old. It is intended to be administered in a professional setting, and it takes approximately 30 minutes per child to administer. The Khmer and English versions of the cDMAT can be downloaded via this link: <http://cdmat.org/projects/>.

What is CB-DMAT?

The CB-DMAT is a community-based screening tool developed based on the cDMAT results. It contains four specific skills (one per domain) that nearly all Khmer children of a certain age are expected to perform. The CB-DMAT takes less time to apply than the full cDMAT. It could be integrated into the regular operation of health centres and used in communities, e.g. by parents and teachers. The Khmer and English versions of the CB-DMAT can be downloaded via this link: <http://cdmat.org/projects/>.

Contact us!

The cDMAT is managed by the cDMAT Core Group that is made up of pediatricians, neurologists, physiotherapists, nurses, disability specialists, and public health professionals.

For further information, including both DMAT tools, research reports and scientific articles, please visit www.cdmat.org or contact our Coordinator Lina Saem Stoey at CDMAT.core.group@gmail.com.
